The half-life describes how long, on average, it takes until one-half of the original radioactive atoms are left. The half-lives of different atoms can vary widely—some are less than a second, and...

It is important to note that the half-life of an mRNA ($t_{1/2}$) is inversely proportional to its decay rate constant (k_{decay}). In a typical time-course experiment, determination of mRNA half-life begins with the analysis of several RNA samples collected at time intervals, and monitoring the loss of a particular message by analyzing equal amounts of these
