The only positive feature is a brief one page discussion on how to create 115VAC 400Hz from a 12-28v DC source (discussion covers converting DC supply to 2400Hz AC using a 555 oscillator, using a 4017 divide-by-6 counter to drive 6 power transistors as 3 push-pull drivers to step-up transformers, producing 3 x 115VAC 400Hz square-wave outputs (120degrees apart), then using simple diodes to smooth square-waves into approximate sine-wave 3-phase outputs).

Aircraft electrical components operate on many different voltages both AC and DC. However, most of the aircraft systems use 115 volts AC at 400 hertz or 28 volts DC. 26 volts AC is also used in some aircraft for lighting purposes, where the power is generated by a commutator which regulates the output voltage of 28 volts DC.
