Financial Modeling, Third Edition | The MIT Press

Benninga has chosen to start the work with an introduction to the tools used repeatedly throughout the text: data tables, getformula, etc. Basic Financial Calculations follows, and then the meaty chapters of previous editions on corporate valuation, WACC, valuation, pro-forma modeling, leasing, portfolios, efficient portfolios, variance-covariance matrix, beta estimation and the security market line, constrained portfolios, the Black-Litterman approach to portfolio optimization, and Monte ...

1b. IRR refers to the rate at which the present value of cash flows would be equal to cash outflows which states an investor must get such rate of return after selecting the project.. It is the rate which makes the present value of cash flows equal to cash outlay and at such rate NPV would be zero. In the given case, it has required to compute the IRR of the project given the information in ...
