Micro vs. Macro. It should be clear by now that economics covers a lot of ground. That ground can be divided into two parts: Microeconomics focuses on the actions of individual agents within the economy, like households, workers, and businesses; macroeconomics looks at the economy as a whole. It focuses on broad issues such as growth, unemployment, inflation, and trade balance.

We evaluate, for the U.S. case, the costs and benefits of three security measures designed to reduce the likelihood of a direct replication of the 9/11 terrorist attacks. To do so, we assess risk reduction, losses, and security costs in the context of the full set of security layers. The three measures evaluated are installed physical secondary barriers (IPSB) to restrict access to the ...

The Mundell-Fleming model, also known as the IS-LM-BoP model (or IS-LM-BP model), is an economic model first set forth (independently) by Robert Mundell and Marcus Fleming. The model is an extension of the IS-LM model. Whereas the traditional IS-LM model deals with economy under autarky (or a closed economy), the Mundell-Fleming model describes a small open economy.

In the current NBA playoffs, the Miami Heat's Andre Iguodala wears a jersey reading "Group Economics," on the back, where his name would normally be. That fashion choice might leave some viewers puzzled, but the basketball series reveals some clues. Some players' jerseys, and the court itself, are emblazoned with "Black Lives Matter,
